## PROFESSIONAL SUMMARY

Quality Engineering leader with 9+ years of experience leading quality initiatives across SaaS web, mobile, desktop, browser extension, and integration-heavy platforms. Experienced mentoring QA engineers, building automation frameworks with Playwright and TypeScript, and partnering with Product and Engineering leaders to improve release confidence and engineering quality. Passionate about growing quality culture through collaboration, automation, AI-assisted testing, and modern engineering practices.

## LEADERSHIP

- Mentored and onboarded QA engineers, sharing testing strategies, automation practices, and product knowledge
- Coordinated release readiness across cross-functional Product, Engineering, and Design teams
- Championed automation initiatives and continuous quality improvements
- Partnered with Product, Design, and Engineering leadership to identify risks, improve testing practices, and raise product quality
- Led User Acceptance Testing (UAT) planning and release validation for customer-facing features

## EMPLOYMENT HISTORY

### Quality Engineer at Iridesco LLC/Harvest, New York City (Remote)

Nov 2019 — Sept 2025

Worked across the full Harvest and Forecast ecosystem, owning quality across web, mobile, desktop, browser extensions, and integrations in a fast-paced, remote environment.

Key contributions:

- Owned end-to-end quality for a complex SaaS product ecosystem, supporting bi-weekly (and occasional weekly) releases while maintaining consistently low production defect rates
- Rebuilt and scaled Playwright integration test automation using TypeScript, significantly improving reliability and expanding coverage across **30+ third-party integrations**.
- Developed and executed API tests validating backend services and integration points across distributed systems
- Maintained and expanded **700+ manual test cases** and **450+ automated tests**, increasing regression coverage across multiple platforms
- Supported bi-weekly and weekly releases across web, mobile, desktop, browser extensions and APIs
- Owned quality across a SaaS ecosystem serving thousands of customers worldwide
- Mentored QA engineers on testing strategy, automation, release readiness, and exploratory testing, helping improve team-wide quality practices
- Collaborated with Engineering to validate performance-sensitive changes and ensure reliability across high-traffic production releases
- Coordinated QA activities across multiple product teams, balancing release priorities, identifying quality risks early, and improving predictability of releases
- Acted as a key bridge between Customer Support, Product, and Engineering, triaging and prioritising issues to improve turnaround time and product stability
- Led QA efforts during the Forecast revitalisation, ensuring quality across both products as they moved toward a unified experience
- Provided technical guidance and mentoring to QA engineers, sharing testing

strategies, automation approaches, and domain knowledge to improve team effectiveness and consistency.

- Collaborated closely within a cross-functional team (PM, Design, Engineering, Support) to refine requirements, identify edge cases early, and improve release confidence
- Drove improvements to QA processes, tooling, and release workflows that increased automation reliability and improved cross-team collaboration
- Performed exploratory, visual, regression, integration, and release testing across web, desktop, mobile, and browser extension platforms.

#### Senior QA Analyst at Chili Piper, New York City (Remote)

Jun 2022 — Jul 2024

Contributed to quality assurance across Chili Piper's scheduling, routing, and CRM-driven products, with a focus on complex integrations and real-time workflows.

Key contributions:

- Tested and validated complex scheduling and routing workflows, including availability logic, booking rules, and real-time calendar synchronisation across multiple customer-facing products.
- Worked extensively with integrations spanning Google Calendar, Microsoft Outlook, Salesforce, HubSpot, and other CRM platforms, validating critical business workflows and ensuring reliable data synchronisation across interconnected systems.
- Collaborated closely with Product and Engineering to analyse defects, refine requirements, identify edge cases early, and improve feature quality before release, contributing to higher release confidence.
- Supported QA efforts during the early development of AI-powered chat capabilities, contributing to test planning, test coverage, and release readiness for emerging AI features.
- Designed, maintained, and executed structured regression test suites for new features, workflow changes, and complex integration scenarios, improving regression coverage and reducing release risk.
- Performed exploratory, visual, regression, integration, API, and user acceptance testing across web applications, browser extensions, backend services, and third-party integrations.
- Coordinated testing activities across multiple concurrent initiatives, balancing priorities and ensuring timely, high-quality releases in a fast-paced SaaS environment.
- Investigated customer-reported issues and partnered closely with Engineering to reproduce, prioritise, troubleshoot, and resolve defects efficiently, improving turnaround time and customer experience.
- Worked across highly interconnected scheduling, CRM, and calendar ecosystems where changes frequently impacted multiple products, integrations, and user workflows, requiring thorough risk assessment, cross-functional collaboration, and comprehensive end-to-end testing.
- Championed a quality-first mindset by proactively identifying risks, advocating for improved testing practices, and helping embed quality earlier in the development lifecycle.

#### QA Lead at Sitemate, Sydney (Remote)

Oct 2019 — Jul 2022

Led quality assurance across Sitemate's web and mobile products (Dashpivot and Sitemate ID), owning testing strategy, release quality, and cross-functional collaboration as the primary QA.

Key contributions:

- Drove a shift in team-wide quality practices by collaborating with Product, Design, and Engineering to embed QA earlier in the development lifecycle
- Defined and executed the quality strategy across web and mobile products,

establishing scalable testing practices and improving collaboration between Product, Design, and Engineering

- Introduced and implemented automated testing for the web application using Cypress, contributing to improved regression efficiency
- Mentored and onboarded new QA engineers, establishing consistent testing practices and accelerating team effectiveness.
- Migrated and restructured test cases into a modern test management system, improving organisation, traceability, and ease of execution
- Planned and coordinated release testing across multiple products, ensuring predictable releases and reducing release risk
- Led User Acceptance Testing (UAT) across multiple products, working closely with stakeholders to validate features against real-world use cases
- Partnered closely with engineers on feature development and bug resolution, improving turnaround time and reducing rework

## EDUCATION

**Bachelor of Science: Telecommunication and Information Technology , Kenyatta University, Nairobi**

Jun 2016
